Step 1 - The Java Servlet receives the page request. This Java Servlet is the configured in such a way that the incoming request will be forwarded to tapestry. The configuration is done in the web.xml as specified in the following program. Filter and Filter Mapping tag redirects all the request to Tapestry Filter.

Apache-Tapestry-Architecture-Tutorialspoint

The tapestry-hibernate library includes, as transitive dependencies, Hibernate and tapestry-core. This means that you can simply replace "tapestry-core" with "tapestry-hibernate" inside the <artifactId> element. Since Hibernate can work with so many different databases, we must explicitly add in the correct driver.
