Communication: Management of ...

Augmentative and alternative communication is typically much slower than speech, with users generally producing 8–10 words per minute. Rate enhancement strategies can increase the user's rate of output to around 12–15 words per minute, and as a result enhance the efficiency of communication. There are two main options for increasing the rate of communication: encoding and prediction.

Alternative Communication Management Of Severe Communication Disorders In Children And Adolescents

There are various methods and tools that can be used to improve the accessibility of curriculum for students with disabilities. Augmentative and alternative communication devices as well as other assistive technologies are often used for this purpose.

Augmentative and Alternative Communication Devices.

AAC stands for Augmentative and Alternative Communication. It is the term used to describe the different types of communication we use alongside or in place of natural speech. Facial expression, body language, pointing, gestures and signs are all forms of AAC. These are known as unaided communication as they do not require any additional aids.
