An accessible explanation of climate change summarizes its science while sharing insights into its implications for the future, answering key questions from the role of fossil fuels to the economic costs of reducing carbon emissions.

Joanna Scott's unparalleled gift for storytelling has inspired hyperbole from critics and her devoted fanbase, which includes some of the most preeminent writers of our time. But not since Various Antidotes, a finalist for the PEN/Faulkner Award, has she turned her talents toward short stories. At the seaside wedding of two lovers kept apart by the caprices of fate, a doting uncle looks on while his errant brother, father of the bride, struggles to free himself from a locked bathroom across town. A young woman arrives in Jazz Age New York with stars in her eyes and a few coins in her pocket and after a string of failed jobs, she thinks she's found salvation in a romance with her boss at a local greasy spoon but learns that her idea of herself and others' ideas of her are quite different. A bright business man seems content with all the trappings his good fortune affords, until a flat tire and a chance encounter with a couple of mechanics in the country upsets his entire view. Here Joanna Scott offers a group of tales that celebrate her acknowledged sense of character, plot and her gift for capturing the

breathhtaking tension even in life's quietest moments.

While it is commonly assumed that languages epenthesize context-free default vowels, this book shows that in loanword adaptation, several strategies are found which interact intricately. Large loanword corpora in Shona, Sranan, Samoan and Kinyarwanda are analyzed statistically, and the patterns are modeled in a version of Optimality Theory which introduces constraints on autosegmental representations. The focus of this book is on English loans in Shona, providing an in-depth empirical and formal analysis of epenthesis in this language. The analysis of additional languages allows for solid typological generalizations. In addition, a diachronic study of epenthesis in Sranan provides insight into how insertion patterns develop historically. In all languages analyzed, default epenthesis exists alongside vowel harmony and spreading from adjacent consonants. While different languages prefer different strategies, these strategies are subject to the same set of constraints, however. In spreading, feature markedness plays an important role alongside sonority. We suggest universal markedness scales which combine with constraints on autosegmental configurations to model the patterns found in individual languages and at the same time to constrain the range of possible crosslinguistic variation.

This book is about HCI research in an industrial research setting. It is based on the experiences of two researchers at the IBM T. J. Watson Research Center. Over the last two decades, Drs. John and Clare-Marie Karat have conducted HCI research to create innovative usable technology for users across a variety of domains. We begin the book by introducing the reader to the context of industrial research as well as a set of common themes or guidelines to consider in conducting HCI research in practice. Then case study examples of HCI approaches to the design and evaluation of usable solutions for people are presented and discussed in three domain areas: - item Conversational speech technologies, - item Personalization in eCommerce, and - item Security and privacy policy management technologies. In each of the case studies, the authors illustrate and discuss examples of HCI approaches to design and evaluation that worked well and those that did not. They discuss what was learned over time about different HCI methods in practice, and changes that were made to the HCI tools used over time. The Karats discuss trade-offs and issues related to time, resources, and money and the value derived from different HCI methods in practice. These decisions are ones that need to be made regularly in the industrial sector. Similarities and differences with the types of decisions made in this regard in academia will be discussed. The authors then use the context of the three case studies in the three research domains to draw insights and conclusions about the themes that were introduced in the beginning of the book. The Karats conclude with their perspective about the future of HCI industrial research.

Table of Contents: Introduction: Themes and Structure of the Book / Case Study 1: Conversational Speech Technologies: Automatic Speech Recognition (ASR) / Case Study 2: Personalization in eCommerce / Case Study 3: Security and Privacy Policy Management Technologies / Insights and Conclusions / The Future of Industrial HCI Research

The Pulitzer Prize–winning historian talks with some of twentieth century ’ s most iconic musicians— “ Riveting . . . Just about every interview has a revelation ” (San Francisco Chronicle). Through the second half of the twentieth century, Studs Terkel hosted the legendary radio show “ The Wax Museum, ” presenting Chicago ’ s music fans with his inimitable take on music of all kinds, from classical, opera, and jazz to gospel, blues, folk, and rock. Featuring more than forty of Terkel ’ s conversations with some of the greatest musicians of the past century, *And They All Sang* is “ a tribute to music ’ s universality and power ” (Philadelphia Inquirer). Included here are fascinating conversations with Louis Armstrong, Leonard Bernstein, Big Bill Broonzy, Bob Dylan, Dizzy Gillespie, Mahalia Jackson, Janis Joplin, Rosa Raisa, Pete Seeger, and many others. As the esteemed music critic Anthony DeCurtis wrote in the *Chicago Tribune*, “ the terms ‘ interview ’ or ‘ oral history ’ don ’ t begin to do justice to what Terkel achieves in these conversations, which are at once wildly ambitious and as casual as can be. ” Whether discussing Enrico Caruso ’ s nervousness on stage with opera diva Edith Mason or the Beatles ’ 1966 encounter in London with revered Indian sitar player Ravi Shankar, “ Terkel ’ s singular gift for bringing his subjects to life in their own words should strike a chord with any music fan old enough to have replaced a worn-out record needle ” (The New York Times). “ Whether diva or dustbowl balladeer, Studs treats them all alike, with deep knowledge and an intimate, conversational approach . . . as this often remarkable book shows, Studs Terkel has remained mesmerized by great music throughout his life. ” —The Guardian “ [Terkel ’ s] expertise is evident on every page, whether debating the harmonic structure of the spirituals or discerning the subtleties of Keith Jarrett ’ s piano technique . . . As ever, he is the most skillful of interviewers. ” —The Independent “ What makes *And They All Sang* a rousing success isn ’ t just Terkel ’ s phenomenal range and broad knowledge, it ’ s his passionate love of the music and his deep humanity. ” —San Francisco Chronicle
