Let's start with some of the basic features of JavaScript that make 'functional' programming possible, before we move on to why it's a good idea. In JavaScript we have two key building blocks: variables and functions. Variables are sort-of like containers that we can put things in. You can create one like so: `var myContainer = "Hey everybody!"`

how 'Function as Data' opens up a world of possibilities. You will then build higher order functions with closures. Arrays will then be introduced, followed by a set of APIs you can use with them. You will learn how to transform one function to another using currying and partial application. The compose function will be discussed in detail, followed by functors and monads. After having an in-depth look at applicative functors, you will learn the new features offered in ES8. The concluding chapters of Beginning Functional JavaScript will show you how to use a functional toolkit to build a small library that allows you to develop web applications, followed by tips on testing your functional code.
