The current name is believed to be in violation of Wikipedia:Naming conventions (capitalization). "Mobile network codes in ITU region 3xx (North America)" has been suggested as a possible title. Please see the discussion on the talk page.

Mobile Network Codes in ITU region 3xx (North America ...
Network coding is a networking technique in which transmitted data is encoded and decoded to increase network throughput, reduce delays and make the network more robust. In network coding, algebraic algorithms are applied to the data to accumulate the various transmissions. The received transmissions are decoded at their destinations.

"Network as Code" (NaC) is the application of the "Infrastructure as Code" concepts to the full network domain, inclusive of traditional data centers, campus networks, WANs, and of course cloud environments. The successful implementation of NaC is part of the wider NetDevOps adoption within an enterprise. It will involve significant changes in the way we think about network design and operations, the culture around network change, and of course the tooling and technology used to ...

What Does "Network as Code" Mean? - Cisco Blogs
A code with this ability to reconstruct the original message in the presence of errors is known as an error-correcting code. This triple repetition code is a Hamming code with m = 2, since there are two parity bits, and 2 2 ? 2 ? 1 = 1 data bit. Such codes cannot correctly repair all errors, however. In our example, if the channel flips two ...

Typhoon Gay was a small but powerful tropical cyclone that caused more than 800 fatalities in and around the Gulf of Thailand in November 1989. The worst typhoon to affect the Malay Peninsula in 35 years, Gay rapidly intensified from a monsoon trough, and on 3 November became the first typhoon since 1891 to make landfall in Thailand. It re-emerged into the Bay of Bengal and reorganized as it ...

Network coding is a method of optimizing the flow of digital data in a network by transmitting digital evidence about messages. The "digital evidence" is, itself, a composite of two or more messages. When the bit s of digital evidence arrive at the destination, the transmitted message is deduced rather than directly reassembled.
