'Mathematica for Physics', is tailored for advanced undergraduate and graduate physics students taking core courses in the physics curriculum. In this book, Robert L. Zimmerman and Fredrick Olness show students how to use Mathematica to solve

standard problems in physics. Because they cover the canonical problems from the core courses, students can practice with the solutions they provide, then modify these solutions to solve additional problems. Students can focus on the physics and leave the algebraic complications to Mathematica.

Zimmerman and Olness take the reader beyond the textbook solutions. They challenge students to cross-check their results using the wide variety of Mathematica's analytical, numerical, and graphical tools.
