The book is written as per the syllabus of the subject Microprocessors and Interfacing Techniques for S. E. (Computer Engineering), Semester-II of University of Pune. It focuses on the three main Page 42/58

parts in the study of microprocessors - the architecture, the programming and the system design. The 8086 microprocessor is described in detail along with glimpses of 8088, 80186 and 80188 microprocessors. The various peripheral controllers for 8086/88 are also discussed. Other Page 43/58

topics that are related to the syllabus but not explicitly mentioned are included in the appendices. Key Features — Programs are given and the related theory is discussed within the same section, thereby maintaining a smooth flow and also eliminating the need for a separate section on the Page 44/58

practical experiments for the subject of Microprocessors and Interfacing Laboratory — Both DOS-based programs as well as kit programs are given — Algorithms and flowcharts are given before DOS-based programs for easy understanding of the program logic

Designed for a one-semester course in Finite Element Method, this compact and well-organized text presents FEM as a tool to find approximate solutions to differential equations. This provides the student a better perspective on the technique and its wide range of Page 46/58

applications. This approach reflects the current trend as the present-day applications range from structures to biomechanics to electromagnetics, unlike in conventional texts that view FEM primarily as an extension of matrix methods of structural analysis. After an introduction and a review of Page 47/58

mathematical preliminaries, the book gives a detailed discussion on FEM as a technique for solving differential equations and variational formulation of FEM. This is followed by a lucid presentation of one-dimensional and two-dimensional finite elements and finite element formulation for

dynamics. The book concludes with some case studies that focus on industrial problems and Appendices that include mini-project topics based on near-real-life problems. Postgraduate/Senior undergraduate students of civil, mechanical and aeronautical engineering will find this Page 49/58

text extremely useful; it will also appeal to the practising engineers and the teaching community. Where To Download

The 8085 Microprocessor:
Architecture, Programming and
Interfacing is designed for an
undergraduate course on the 8085

Page 51/58

microprocessor, this text provides comprehensive coverage of the programming and interfacing of the 8-bit microprocessor. Written in a simple and easy-to-understand manner, this book introduces the reader to the basics and the architecture of the 8085

Page 52/58

microprocessor. It presents balanced coverage of both hardware and software concepts related to the microprocessor.

This up-to-date and contemporary book is designed as a first level undergraduate text on micro-

processors for the students of engineering (computer science, electrical, electronics, telecommunication, instrumentation), computer applications and information technology. It gives a clear exposition of the architecture, programming and interfacing and Page 54/58

applications of 8085 microprocessor. Besides, it provides a brief introduction to 8086 and 8088 Intel microprocessors. The book focusses on: microprocessors starting from 4004 to 80586, instruction set of 8085 microprocessor giving the clear picture of the operations at the Page 55/58

machine level, the various steps of the assembly language program development cycle, the hardware architecture of microcomputer built with the 8085 microprocessor, the role of the hardware interfaces: memory, input/output and interrupt, in relation to overall microcomputer Page 56/58

system operation, peripheral chips such as 8255, 8253, 8259, 8257 and 8279 to interface with 8085 microprocessor and to program it for different applications.
