Accumulation of starch under low temperature and low N stress, but

decrease in starch levels

under low P conditions

indicated that only low

P treated leaves suffered

carbon starvation.

Conclusions: Maize

employs very different

strategies to manage N

and P metabolism under

stress. While nitrate

Plant And Soil

Nitrogen is next to  
carbon in importance in  
living organisms. In a  
living cell, nitrogen is an

*Page 28/33*

Plant And Soil

Download File

PDF Nitrogen

important constituent of amino acids, proteins, enzymes, vitamins, alkaloids and some growth hormones.

Therefore, study of nitrogen metabolism is absolutely essential because the entire life process is dependent on these nitrogen-containing molecules.

Abstract. We sought to explore the role of postanthesis carbon and nitrogen (C-N) metabolism of hybrid rice in increasing yield and nitrogen utilization efficiency (NUE). We used the  $^{13}\text{C}$  and  $^{15}\text{N}$  dual-isotope tracer method and physiological/biochemical analysis and established different irrigation and nitrogen
