Unfortunately, due to a DMCA (copyright) complaint from the publisher of Griffiths's textbook Introduction to Quantum Mechanics, I must remove my solutions to the problems. Although my solutions were actually my own work and were not copied from any published source, they probably do duplicate to some extent the solutions in the solutions manual, so I can understand why the publisher lodged the complaint.

r, and $|l + 1\rangle$? m^2 $1/4$, which is to say, $|l + 1/2\rangle = m^2$, or $(l + 1/2)^2 = m^2$, or $l = |m|$? $1/2$. [Our present equation depends only on m^2 , and hence is the same for either sign, but the solution to Problem 4.39 assumed $l + 1/2 \neq 0$ (else u is not normalizable), so we need $|m|$ here.] Quoting 4.39: $E = \langle j$.

David Griffiths' book will mark his place in this world as a Master of Explaining Impossible Topics. With humor, intrigue, and adventure through the dark and creepy paths of quantum queerness, Griffiths has a rare talent (but for Atkins, I've never seen it before) for being able to match the incomprehensible microworld with neural weirdness of the macro that makes the topic comprehensible.
